

Ramate

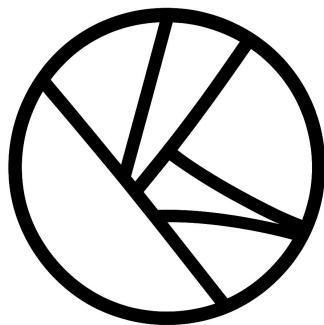

Ramate is a guild for large-footprint
computing technology.

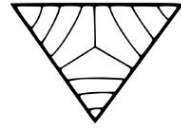

Initial Conceptual Focus

We're making a bet on OAC.

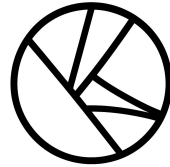

Aggressively pursuing conceptual development of OAC will form the basis for strategic coherence.

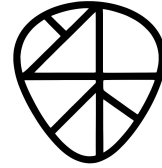

Ordered Atomic
Collaboration
(OAC)

Robles

Demonstrating Utility
and Generating Revenue
in the Short-run

Build broadcast-limited,
participation-required network;
reserve minter and charge for limit
increases.

Generate revenue from utility.

0

...

$n-k$

...

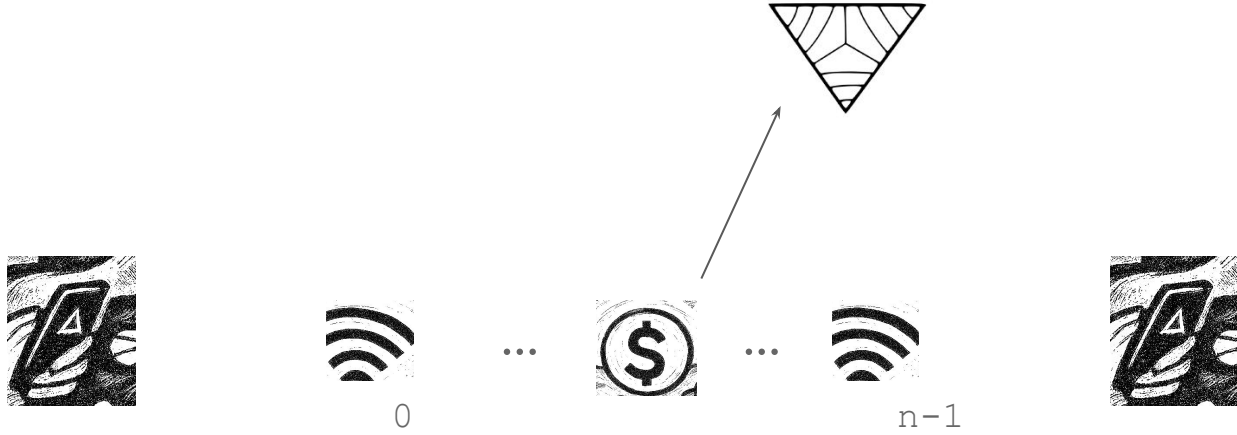

$n-1$

Work, broadcast, work.

Work, broadcast, upgrade, broadcast
work.

Work, broadcast, upgrade, broadcast
work.

Non-speculative; compute credit.

Become the preferred order.

Decentralized social media or seed for
decentralized internet?

Why not use a centralized platform?
Privacy isn't intrinsically improved.
Revenue is still directed back to a central
entity. Compute scaling cannot be better
than centralized, right?

You have the opportunity to freely
change the order and you know how to
do it.

Developer accountability.

Technology meant to grow beyond a
company.

There is an argument that compute can scale adaptively in ways that a centralized system could not.

Why not operate a centralized platform?

Developer accountability.

Clearer business model.
